

In **CSIA's [Chimney Physics](#) program**, you will gain the knowledge you need to solve tough problems. You'll learn about stack effect, adverse pressures and how they are created, as well as indoor air quality solutions. This program includes solutions for problems related to fireplaces, furnaces and hearth products.

The two day class is being taught by Mike Van Buren in State College, PA. During this two day course, you'll learn how to diagnose common homeowner complaints that your competition is likely to miss. Understanding the house as a system allows you to start asking the right questions with the first homeowner call. You'll complete the session with an expert skill set and the confidence to accurately communicate complex house pressure concepts.

August 9-10, 2013

Sponsored by the PA Guild of Professional Chimney Sweeps
